

Hand Edger

Joyfay Delicate

User Manual

Dear Customers:

Congratulations!

You have purchased hand edger; it is really a good and correct choice of yours. In order to help you grasp the directions for using this machine and prolong its life, you are advised to read this manual with great care.

We reserve the right to change the information and instruction of the manual, we won't notice separately and do not bear the responsibility.

Direction for Operation

When this machine is to be used, connect the hose with the down water tank, then place the down water tank into the bottom of the machine and then lead the drain pipe to the sewer.

Place the upper water tank on the top of the machine and put into some clean water. When the machine is used for the first time, take the sponge out from under the water valve, absorb enough water and then put it back to original place. Open the water valve and set the drop at 80-100 per minute, Then turn on the switch, the machine is ready to be used.

If model W wheel is chosen, the right side will be rough grinding, the left is fine grinding. When model WV wheel is chosen, the same with model W, just there is an extra V-shape to refine the lens.

After used for a period of time, take the down water tank out and clean it in case the draining hole would be blocked.

When the grinding wheel has been used for a period of time, grinding fatigue may appear. In this case, please turn on the water valve while use the oilstone stick to recondition the wheel.

Marks

- If you buy the machine with normal switch, when turn on the power switch ,the wheel will rotate.
- If you buy the machine with touching switch, when you edge the lens, just need touch the stainless steel piece, the machine will work automatically, after finishing and moving out, the machine will stop automatically.(If the touching switch is insulated which will affect the machine and the wheel won't rotate).

Safety Precautions

[Warning]

Don't operate the machine before reading thoroughly and grasping all the instructions and rules. Unknown the rules stated in the manual may cause accidents such as fire, shock personal injury etc.

In order to operate the machine and instruct others on the safe side all the time, please read this manual over and over.
